**Dynamic Web Development**

**Multimedia III** is a high-level Dynamic Web Development class which students take toward the end of the curriculum. Students work on Flash projects which utilize action scripting. Some of these Flash components will be used inside another larger project including websites, flash games and quizzes and their final portfolio project.

*Instructor Tim Brown and student Tom Carter.*

“*The University of Kentucky didn’t offer a web development program. They had a few classes, but overall, the curriculum at SCTD was exactly what I was looking for. It is a lot smaller, which is a good thing. With small classes, it’s really easy to get one-on-one time with instructors which I think makes for the best experience.*

TOM CARTER, Dynamic Web Development

**Computer Network Security/Forensics**

In the **Computer Forensics** class, students analyze USB-drives to determine the contents of this removable media. That’s not as easy as it sounds since the contents of the USB-drives they are working with have all been deleted. Additionally, graduates of this program will be prepared for a variety of related certification exams.

*Instructor Jana Godwin and Frances King.*

“*Very good class; outstanding teacher. I have learned a lot, especially about recovering evidence from different types of media.*

FRANCES KING
Computer Network Security/Forensics

**Interior Design**

**Meredith Cann, left, and Shannon Driskell proudly display their first concept boards based on a celebrity they chose.**

**Introduction to Interior Design** orients students to the field of Interior Design. The class helps students become acquainted with SCTD, the Interior Design profession decisions they need to make about their career goals. The class provides a solid foundation for all other courses in the program.

*“I chose SCTD because I wanted a smaller school and wanted to explore Interior Design on a short term scale (2 years) as opposed to long term (5 years).”

MEREDYTH CANN
Interior Design

*“I heard great things about SCTD’s Interior Design program. I wanted a small class base to be able to do a lot of hands-on. I love my Intro to Interior Design class; I’ve learned so much already.”*

SHANNON DRISKEE
Interior Design

**CADD for Interior Design** exposes students to the 3D computer drafting program: Autodesk Architecture 2010. Students learn to create interior perspectives and isometrics on the computer. Space planning, room finish schedules and reflected ceiling plans are also studied in this class.

**Design History II** provides a study of architecture, furniture styles, design philosophies and artistic contributions made by various world civilizations. Students learn a basis for their design futures as they learn about the design characteristics and motifs from each time period.

*“Since I have been at SCTD, I have been teaching. I have a wonderful outside contacts for after I graduate. I’ve had wonderful field trips and learning outside the classroom.”*

SAM NUGEN
Interior Design

*“This is my third CADD class but it is more hands-on for the design field which makes it very interesting. I feel like I’ve learned a lot about my specific study and have had lots of hands-on opportunities.”*

SHRILEY MENDEZ
Interior Design

*“With an Interior Design degree I can do more than decorate houses. I can do set design, textile design, furniture design, and a lot more! I love coming to school and being prepared to what excites me.”*

ASHLEY KLONZ
Interior Design

*“I chose SCTD because I love the Interior Design program offered. I felt like it was a great learning environment and I would have been well-prepared to enter the industry.”*

ARITHA BEROA
Interior Design
