Less than a year ago, three co-op students arrived from Bangladesh and launched Sullivan University’s International MBA co-op Program (See Herald, Fall 2009). Since the Spring 2010 quarter began, the program has eclipsed 50 students and is recognized as a premier Curriculum Practicum Training Program within the United States. While the majority of the students are from India and Bangladesh; Israel, Egypt; South America; Europe; and Gambia are also represented. Pending applications represent Mexico, Jordan, Gambia are also represented. Pending applications represent Mexico, Jordan, Kenya, China, and Australia, and the Philippines. The growth and early success of the initiative, however, is only as strong as the efforts of the current students.

Student was Sullivan’s best choice

The remainder of this article was written by two hundred and brilliant students, Alok Mohan and Dr. Palla.

“Six months have passed since our arrival and yet it feels like yesterday and it seems like years ago that I first students for a new program has its own advantages and disadvantages. Being first turned out to be an uphill climb in the market-book but rich on experience. The joy of discovering a completely different culture and the unique environment to experience on its own. The friendly nature and Sullivan staff created a new and fresh outlook in our thoughts, “Why couldn’t the colleges be the same back home?”

The MBA program at Sullivan is flexible and, therefore, it is more productive. The real time work experience is an integral part of the Sullivan curriculum and the support given by instructors enhances our career aspirations. No educational programme would be effective without proper research tools and Sullivan students have access to the best academic databases in the world. Sullivan’s MBA is a課程 designed to provide the career-centered training needed to gain solid footing in this dynamic field. In addition to the core common courses, students will receive education in Designing & Managing Health Care Systems, Financing Health Care Organizations & Programs, and Managing Health Care Information Systems. The combination of the huge influx of baby-boomers and health reform makes health care management one of the most promising career choices available to students who contemplate MBA degrees.

And that’s not all! Some additional program concentrations are already in the works. According to Dr. Miller, “we’re looking into building programs based on professional bodies of knowledge and emerging areas of interest and partnering with businesses designed to provide the career-centered training needed to gain solid footing in this career field. In addition to the common core courses, students will receive education in Designing & Managing Health Care Systems, Financing Health Care Organizations & Programs, and Managing Health Care Information Systems. The combination of the huge influx of baby-boomers and health reform makes health care management one of the most promising career choices available to students who contemplate MBA degrees.”
